AHRQ Series on Complex Intervention Systematic Reviews

The US Agency for Healthcare Research and Quality (AHRQ) have released a series of papers intended to help researchers design and conduct systematic reviews to better answer important clinical, policy, and research questions to improve health care and health outcomes.

- **Paper 1**: An introduction to a series of papers that provide guidance and tools for reviews of complex interventions
- **Paper 2**: Defining Complexity, Formulating Scope and Questions
- **Paper 3**: Adapting frameworks to develop protocols
- **Paper 4**: Selecting Analytic Approaches
- **Paper 5**: Advanced Analytic Methods
- **Paper 6**: PRISMA-CI Extension Statement & Checklist
- **Paper 7**: PRISMA-CI Elaboration & Explanation
- **Paper 8**: Data collection and management Data collection in Pragmatic Trials

Document Delivery – internal and bulk requests

You may already know about our Document Delivery service, where you can request articles that are not available via our journals list.

Did you know you can also use this service to obtain articles we do have access to?

We're search experts, and we can locate an article, download it, and send it to you quicker than you can say “now how do I get to the Library's journals database again?”.

Have you got a list of 100 citations you want us to find the full text for? No problem, get in touch, we'll work out a delivery time frame.

Ask a Librarian service passes its 15th anniversary

Since launching our Ask a Librarian service in 2002, we've answered nearly 5,000 questions, with around 350 of these during 2017 alone.

Send us your enquiry and we'll get back to you within one working day.

In the meantime, check our FAQ or Fact Sheets to see if your question has already been answered.
Cochrane Library: new items

Access
Select Cochrane Library from the library’s list of databases, and just start searching.

A registered login allows you to save search histories for future use. Go to Advanced Search to log in or register for an account.

iMedical apps reviews

Best new medical apps of the week:
Reducing risks for IV drug users, virtual reality to demonstrate new tech, and symptom tracking for Tourette’s

“This week’s list of best new medical apps including some interesting additions to help IV drug and opioid users avoid risky behaviors, linking patients with multiple sclerosis specialists, as well as other patients, and an interesting new virtual reality app.” Read more ...

Tech Spotlight: monARC is building patient research networks for next generation clinical trials

“Since 2009, iMedicalApps has given readers the latest in digital health with a deep knowledge of medicine, the mHealth marketplace, and what makes apps work. Our audience – the largest group of clinicians interested in digital health anywhere on the internet – is pretty tech savvy, too. And they've created startups, apps, and platforms, some of which may be the "next big thing" in healthcare. To showcase these up-and-comers, we've decided to create the iMedicalApps Tech Feature. For our first Tech Feature, we'd like to present a startup founded by Komathi Stem, a biomedical engineer with a long track record in the pharmaceutical industry, focused on driving the next generation of clinical research.” Read more ...

Chronic Kidney Disease (CKD) Care app:
eGRF Calculator and Quick Reference from the National Kidney Foundation

“The latest app from the National Kidney Foundation is called Chronic Kidney Disease (CKD) Care. The app calculates eGFR and based on other input including the albumin creatinine ratio, demographics and urinary findings generates a differential diagnosis for a specific patient. The app contains quick reference guides for each of these diagnoses based on NKF guidelines.” Read more ...

Text messaging interventions may improve mothers' adherence to proper infant sleeping practice

“We've covered the growing number of infant wearables that claim to monitor sleeping infants, though they generally don't explicitly claim to prevent SIDS. And we should note that there's no data supporting most of these devices; on the contrary, home monitoring to prevent SIDS has historically not panned out in studies. In this study, a group of researchers passed on wearables and other similar technology. Instead, they focused on using mobile technology to help educate new mothers on safe sleep practices when they needed that information the most.” Read more ...
Some lighter reading at the Library
Take a break from the daily grind and peruse a book from our biography or history categories ...

At 150 years old, Gray’s Anatomystill sets the standard in medical textbooks, yet little has been written about its author, Henry Gray. Even less celebrated is Henry Carter, the illustrator who brought Gray’s groundbreaking anatomy text to life. *The Anatomist: a true story of Gray’s Anatomy* explores the lives of these two men, balancing biographical chapters with the author’s own experience in the anatomy classroom, dissecting cadavers and marvelling at each new discovery with prose both lucid and arrestingly beautiful.

Dancing in My Dreams describes the disease of polio and its treatment, the scientific endeavour that led to the discovery of the polio virus, and the studies in virology and immunology that culminated in the production of a polio vaccine. It highlights the experiences of patients and the voices of survivors, revealing how ethnicity, class, age and gender all mediated individual’s reactions to the disease, which included fear, rejection, denial and anger.

**Double helix, double joy: David Danks, the father of clinical genetics in Australia** / Carolyn Rasmussen with Alister Danks. Miegunyah Press, 2010.
Professor David Danks explained in a public lecture revealingly titled, Double Helix, Double Joy, that ‘Even from its infancy it was apparent that the double helix was going to change not only science, but also the community’s image of science’. ‘Double Joy’ conveyed his sense that the developments cascading from Watson and Crick’s initial DNA discovery would yield ‘immense benefits’ for people generally, and also for his own research ambitions.

Medical history offers us many wise thoughts, a few misguided notions, and a host of intriguing back-stories. On the Shoulders of Medicine’s Giants presents a selection of these, and tells how the words of medicine’s “giants”—such as Hippocrates, Sir William Osler, Francis Weld Peabody, and Elizabeth Kübler-Ross—are relevant to medical science and practice in the 21st century.

EndNote Tip: Prompt to open a library
When you open Endnote the last used library will automatically open by default. That’s great if you only own a single library, but what if you have several?
If you own many libraries there are other options that may be more useful. Go to Edit/Preferences/Libraries and select the option that works best for you: Open the specified libraries, Prompt to select a library, or Do nothing.

Revolutionising the way medical students learn with new technology: PlayMed uses online experiential role-playing in a virtual hospital environment to help final-year medical students become better practitioners through experience-based learning. Read more ...

Deadly peanut allergy cure on horizon: A peanut allergy treatment undergoing clinical trials is showing huge promise for people suffering from the deadly allergy. Researchers at the Murdoch Children's Research Institute (MCRI) have found that the clinical trial is showing long-lasting effects, more than four years after the original study. Read more ...

Antibiotic use in Australian infants 150% higher than UK, other countries: When it comes to antibiotics, Australian infants have one of the highest rates of treatment in the world, increasing the risk of antibiotic resistance. Half of Australian infants are treated with antibiotics during their first year of life according to the Barwon Infant Study, which has been published in the Journal of Paediatrics and Child Health. Read more ...

NHMRC Research Excellence Awards: Exceptional researchers in the fields of infectious disease, autoimmunity, chronic pain and Parkinson's disease were among the Australians honoured at the NHMRC Research Excellence Awards. Read more ...

Aussie-invented bone 'glue' could halve patient recovery times: An Australian biotech company has created a bone graft substitute that can be applied in liquid form — a first of its kind. Read more ...

Some children on IV can be treated at home: Researchers from Murdoch Childrens Research Institute (MCRI) have found that some children with severe infections requiring intravenous (IV) antibiotics can safely have these at home, and that home treatment was as good as in hospital in terms of safety, cost and patient satisfaction. Read more ...

Rethinking and redesigning clinical workspaces: Drivers such as cost pressure on healthcare systems, rising patient volumes and demands from patients engaged in their own healthcare, together with advances in technology, are transforming the way care is delivered, creating a shift in what is required in clinical spaces. Read more ...

**BOOKS**

This book provides recommendations for evaluation and therapy in the area of acute pediatric neurology; these are presented didactically with frequent use of illustrations and algorithms. Chapters in the first part of the book discuss presenting symptoms of acute neurological conditions. The second part of the book covers major areas of acute pediatric neurology and each of these chapters has three key elements: description of presenting symptoms; recommended assessments; and recommended interventions. It provides an accessible, clinically focused guide to assist physicians in the emergency ward or intensive care unit in decisions on diagnosis and therapeutic interventions in all major acute pediatric neurological diseases.

Landau-Kleffner syndrome (LKS) is a rare childhood neurological syndrome. It is characterised by a sudden or gradual loss of ability to understand or express language (aphasia) and usually occurs in children between the ages of 3 and 7 years. Rolandic epilepsy is the most common epilepsy syndrome in childhood with involvement of the oropharyngeal manifestations, hypersalivation and arrest of speech. These two syndromes are considered to be aspects of the 'epilepsy-aphasia spectrum' with common rolandic epilepsy being the mildest form and LKS the most severe.

This essential text is progressively appropriate for introductory through to advanced medical and biochemistry courses. It also provides a succinct review of inborn errors of metabolism, as well as new coverage of sports biochemistry, and the metabolism of lipids, carbohydrates and cholesterol.

This compact pocketbook provides orthopaedic surgeons in training with concise and relevant core knowledge on all aspects of children's fractures. Content includes the common fractures that affect children and "Red flags", such as the key management points of potentially serious injuries and complications. This book would also be useful to pediatricians and emergency department doctors working in busy clinics that need a quick reference guide and with highlighted "red flags" of children's fractures.

This book is divided into two parts. The first part provides an introduction to the basic assessment of patients, including cardiovascular physiology, pathophysiology and the underlying concepts in coronary heart disease,
preoperative evaluation, intraoperative management, and interpretation of cardiac catheterization data. The second part of the book addresses disorders and diseases in a templated manner covering the anatomical and physiological features, surgical therapies, anesthetic approach and postoperative management. Chapters on the heart and heart and lung transplantation consider the additional complexities of those patients and anesthetic considerations for non-cardiac surgery after heart transplantation.

[online]
This text offers practical advice on diagnosis and management of one of the most rapidly developing medical specialties. It provides an overview of clinical approaches to assist the medical student or junior doctor on rotation, as well as looking at practical procedures and specific details of the most commonly encountered urological disorders.
